Education

Arizona State University

12/2025

Bachelor's in Computer Science (Software Engineering), GPA: 3.6 / 4.0

Tempe, AZ

Relevant Coursework: Probability & Statistics; Data Structures & Algorithms; Operating Systems; Software QA & Testing; Distributed Software Development; Principles of Programming Languages; Linear Algebra; Software Integration & Engineering

Experience

University of Nevada, Las Vegas — Smart Cities (NSF Funded) [\[GitHub\]](#)

06/2025 – 08/2025

Undergraduate Research Assistant

Las Vegas, NV

- Engineered a hybrid travel-time prediction model leveraging Google Maps API and machine learning, enabling cross-modal comparisons of driving, biking, and transit routes across 24k+ samples.
- Implemented reinforcement learning algorithms to optimize mode selection by time of day and location, reducing average commuter travel time while lowering projected emissions.
- Published peer-reviewed paper in ICSEng 2025 and delivered research presentation at the international conference.

FOX (Broadcast Engineering)

09/2024 – 11/2024

Software Engineer Intern

Tempe, AZ

- Integrated Infoblox (IP address management) and NetBox (network source-of-truth) using AWS Lambda, reducing manual reconciliation by 50%.
- Built an internal LLM chatbot with Retrieval-Augmented Generation (RAG) over engineering docs, improving knowledge access and speeding up troubleshooting.

University of Tennessee at Chattanooga — iCompBio (NSF Funded)

05/2024 – 07/2024

Undergraduate Research Assistant

Chattanooga, TN

- Performed large-scale analysis on 1,500 hypothetical proteins in *pneumoniae*, identifying structural motifs with potential for biomarker discovery and novel drug targets.
- Automated preprocessing pipelines in Python, accelerating protein sequence analysis workflows and enabling team members to evaluate candidates 2× faster.

Projects

SalesNest — Self-Improving AI Call Agent [\[GitHub\]](#)

04/2026

- Built an AI sales agent that runs voice cold calls, handles objections, and improves its script via a feedback loop.
- Designed a two-stage LLM pipeline (analysis → optimization) to identify weak points and refine responses.
- Integrated local STT (faster-whisper) and TTS (edge-tts) for real-time interaction, with a lightweight web demo interface.

NBA Data Warehouse & Analytics Pipeline [\[GitHub\]](#)

02/2026 – 03/2026

- Built a Python data pipeline to extract NBA game and player statistics from the NBA Stats API across 10 seasons.
- Designed a PostgreSQL data warehouse with fact and dimension tables for players, teams, games, and seasons to support analytical queries.
- Implemented ETL workflows and SQL aggregation marts to transform raw data into structured datasets used for Power BI analytics dashboards.

Modular AI Camera System (Capstone) — ARED Group Inc. [\[Poster\]](#)

01/2025 – 12/2025

- Engineered a modular, edge-deployed AI video analytics system for ARED Group Inc, enabling real-time monitoring and security insights from live camera streams.
- Built ONNX Runtime pipelines for real-time inference on CPU-only edge devices.
- Designed microservices architecture with API-based communication for modular AI features and real-time data flow.
- Containerized and deployed services using BalenaOS, enabling remote management and over-the-air updates.
- Implemented monitoring and logging to track performance and optimize inference latency.

Technical Skills

Languages: Java, C, C++, Python, R, SQL, C#, HTML, CSS, MATLAB

Cloud & Containerization: AWS, Kubernetes (K3s), Docker, BalenaOS

AI / Machine Learning: Scikit-learn, TensorFlow, PyTorch, Q-learning, Computer Vision, LLMs

Data & Analytics: PostgreSQL, ETL Pipelines, Data Modeling, Power BI

Dev Tools: Git, CI/CD Pipelines, JUnit, REST APIs, FastAPI
